

Dear Speechify Hiring Team,

I'm excited to apply for the Tech Lead, Android Core Product role. Over 9 years as a Senior Android Engineer, I've repeatedly taken end-to-end ownership of major B2C features — from architecting Clean Architecture from scratch at Halyk Bank to leading Live Order Tracking and ADA Compliance work at Slice, where I drove purchase conversion up by 50% and accelerated development speed by 80% through a Jetpack Compose migration. My background in Kotlin, Coroutines, Kotlin Flow, Dagger/Hilt, and MVVM, paired with a TDD-first discipline (achieving ~100% coverage on critical features at Arlo), aligns closely with what this role demands. I've also led teams and conducted 50+ technical interviews at Vention, giving me experience mentoring engineers and shaping technical direction — skills I'd bring to shaping the future of your Android team. I'd welcome the opportunity to discuss how my product-oriented, ownership-driven approach can help Speechify's Android Core Product team deliver reliable, high-quality features.

Best regards,

Maksim Sukhotski
