

Dear Allegro Hiring Team,

I'm writing to apply for the Senior Mobile Software Engineer (Android) role on the Allegro Pay team. With 9 years of native Android development experience, I bring deep expertise in Kotlin, Jetpack Compose, Coroutines, and Kotlin Flow, along with a strong track record of applying MVVM/MVI and Clean Architecture in production B2C applications. At Slice, I migrated legacy views to Jetpack Compose, accelerating development speed by 80%, and at Arlo I used Coroutines and Flow to manage real-time smart-device integrations while achieving near-100% test coverage through TDD with MockK and Espresso. I've also architected a Clean Architecture system from scratch at Halyk Bank and built custom CI/CD workflows that reduced delivery bottlenecks by 90%. Beyond hands-on engineering, I've conducted 50+ technical interviews and mentored junior and mid-level developers, which aligns well with the mentoring expectations of this role. I'd welcome the opportunity to bring this combination of architecture, testing rigor, and mentorship experience to Allegro Pay.

Best regards,

Maksim Sukhotski
