

Dear Pekao CoNext Hiring Team,

I'm writing to register my interest in the Senior Android Developer role within your contractor community for Grupa Pekao's projects. With 9 years of Android experience across companies like Zalando, Slice, Arlo, and Halyk Bank, I have built B2C applications in Kotlin and Java using MVVM and Clean Architecture, with Dagger for dependency injection and Retrofit for API integration. At Halyk Bank I architected a modular Clean Architecture trading application from scratch and led a team of 5, while at Arlo and Turkcell I maintained near-100% unit test coverage using TDD practices (MockK, Espresso). I've also set up Gradle-based CI/CD pipelines and quality gates, and led 50+ technical interviews as a hiring lead at Vention, reflecting my focus on code quality and mentorship. I'd welcome the opportunity to bring this experience to one of your long-term banking projects.

Best regards,

Maksim Sukhotski
