

Dear Speechify Hiring Team,

I'm excited to apply for the Tech Lead, Android Core Product role. With 9 years of Android engineering experience, I've spent much of my career owning complex, user-facing B2C features end-to-end — from leading UI/UX-driven delivery at Slice, where I improved purchase conversion to 50% and accelerated development speed by 80% through a Jetpack Compose migration, to architecting real-time hardware-to-app communication at Arlo with Coroutines and Flow. My work has consistently centered on Kotlin, Kotlin Coroutines, Kotlin Flow, Dagger, and MVVM/Clean Architecture, paired with rigorous TDD practices (achieving ~100% coverage on critical features at Arlo). Beyond hands-on delivery, I've led teams, conducted 50+ technical interviews at Vention, and mentored developers through the Belarus Kotlin User Group — experience that aligns closely with this role's blend of feature ownership, cross-team collaboration, and code review responsibilities. I'd welcome the opportunity to bring this combination of technical depth and product-focused leadership to your Android Core Product team.

Best regards,

Maksim Sukhotski
