

Dear Mindbox Hiring Team,

I'm writing to apply for the Android Developer role. Over 9 years I've built Android applications in Kotlin with Jetpack Compose, Retrofit, Room, and Dagger/Hilt, applying Clean Architecture and MVVM/MVP patterns across companies including Zalando, Slice, Arlo, Halyk Bank, and Turkcell. At Arlo, I worked extensively with Coroutines and Flow to manage security-sensitive Smart Device integrations, and drove TDD practices that reached ~100% code coverage on critical features. At Halyk Bank I architected a modular Clean Architecture system from scratch and built custom CI/CD workflows that cut delivery bottlenecks by 90%. I'm comfortable collaborating in distributed, cross-functional teams, as demonstrated during my time at Zalando practicing Extreme Programming and pair programming. I'd welcome the chance to bring this experience to Mindbox's engineering team.

Best regards,

Maksim Sukhotski
