

Dear intent Hiring Team,

I'm a Senior Android Engineer with 9 years of experience building B2C applications and Smart Device/IoT integrations, and this role caught my eye because BLE hardware communication has been at the core of my most rewarding work. At Arlo, I architected real-time hardware-to-app communication for the Camera UX 3.0 migration and managed Smart Device integration and security features using Coroutines and Flow, backed by ~100% test coverage through a TDD approach with MockK and Espresso. I also bring strong, current Kotlin and Jetpack Compose experience from Zalando and Slice, where I helped migrate legacy views to Compose and accelerated development speed by 80%. Beyond hands-on engineering, I've led teams, architected Clean Architecture systems from scratch, and mentored developers through the Belarus Kotlin User Group. I'd welcome the chance to bring that combination of hardware-facing Android expertise and disciplined engineering practice to your connected device projects.

Best regards,

Maksim Sukhotski
