

Dear Mindbox Hiring Team,

I'm writing to apply for the Android Developer role. With 9 years of Android experience, including deep work with Kotlin, Jetpack Compose, Retrofit, Dagger/Hilt, and Coroutines/Flow, I've architected Clean Architecture systems from scratch (Halyk Bank) and led CI/CD process improvements that cut delivery bottlenecks by 90%. At Arlo, I built and secured Smart Device/IoT features — including security-critical functionality such as the Emergency Button and device logging — while maintaining ~100% test coverage through TDD with MockK and Espresso. I'm comfortable operating in distributed, cross-functional teams, as demonstrated across my time at Zalando, Slice, and Arlo. I'd welcome the opportunity to bring this architecture, security, and testing background to your team.

Best regards,

Maksim Sukhotski
