

Dear Hiring Team,

I'm writing to express my interest in the Android Developer role at ASTEK Polska. With 9 years of Android experience, I've architected Clean Architecture systems from scratch at Halyk Bank, led a team of 5 while cutting delivery bottlenecks by 90%, and built MVI/MVVM-based presentation layers backed by Kotlin Flow and Coroutines across roles at Arlo, Zalando, and Slice. At Arlo, I used Coroutines and Flow to manage real-time hardware-to-app communication and Smart Device integration, achieving close to 100% test coverage through TDD. I bring strong SOLID design discipline, deep experience with asynchronous programming, and a track record of mentoring engineers and shaping technical roadmaps as a hiring lead at Vention. I'd welcome the opportunity to bring this architectural and delivery experience to your client's financial-sector Android project. Thank you for your consideration.

Best regards,

Maksim Sukhotski
