

Dear Hiring Team,

I'm writing to apply for the Senior Android Developer position at Antal. With 9 years of Android experience, including architecting a modular Clean Architecture application from scratch at Halyk Bank and driving CI/CD workflows that cut delivery bottlenecks by 90%, I bring hands-on expertise in MVVM, Clean Architecture, and SOLID principles that align directly with your requirements. At Slice, I led high-traffic B2C UI/UX features and accelerated development speed by 80% by migrating legacy views to Jetpack Compose, while at Arlo I achieved ~100% code coverage through TDD and introduced automated quality gates to strengthen engineering standards. I'm comfortable working independently and within cross-functional agile teams, collaborating closely with product, design, and backend counterparts, as demonstrated across roles at Zalando, Slice, Arlo, and Halyk Bank. I'd welcome the opportunity to bring this architectural and quality-driven mindset to your team.

Best regards,

Maksim Sukhotski
