

Dear Hiring Team,

I'm writing to apply for the Senior Android Developer role on your electromobility project. With 9 years of Android experience, I've spent recent roles at Zalando and Slice building native features in Kotlin and Jetpack Compose, including an 80% development speed improvement from migrating legacy views to Compose at Slice. At Halyk Bank, I architected a Clean Architecture solution from scratch and led a team of 5 in an Agile environment, cutting delivery bottlenecks by 90% through custom CI/CD workflows. My background also includes rigorous TDD practices (MockK, Espresso) achieving near-100% code coverage on critical features at Arlo, along with active code review leadership and cross-functional collaboration with PO, QA, and design teams. I'd welcome the opportunity to bring this architecture and testing discipline to your EV charging infrastructure project.

Best regards,

Maksim Sukhotski
