

Dear Hiring Team,

I'm writing to apply for the Senior Mobile Engineer role, bringing 9 years of Android engineering experience across B2C and IoT/Smart Device products. At Arlo, I architected real-time hardware-to-app communication for a camera platform migration and built Smart Device integrations with near-100% test coverage using a strict TDD approach (MockK, Espresso), which mirrors the reliability and testing rigor SDK development demands. At Halyk Bank, I architected a modular Clean Architecture from scratch and built custom CI/CD workflows that cut delivery bottlenecks by 90%, experience directly applicable to designing, versioning, and shipping SDKs. Beyond hands-on engineering, I've conducted 50+ technical interviews as a hiring tech lead and mentored developers through the Belarus Kotlin User Group and ITStep Academy workshops, so supporting external developers integrating an SDK is work I already enjoy. I'd welcome the opportunity to bring this combination of systems architecture, testing discipline, and developer-facing mentorship to your team.

Best regards,

Maksim Sukhotski
