

Dear Hiring Team, I'm writing to apply for the Senior Android Automotive Engineer role at Emerge Soft. With 9 years of Android engineering experience, I have architected systems from scratch, including a real-time trading application's Clean Architecture at Halyk Bank and real-time hardware-to-app communication for Arlo's Camera UX 3.0 migration using Coroutines and Flow. At Arlo I also managed Smart Device integration and security features while achieving ~100% code coverage through TDD with MockK and Espresso, and I have deep experience optimizing multi-threaded, reactive systems across distributed teams at companies like Zalando and Slice. I'm confident this background in system-level Android architecture, performance-focused engineering, and rigorous testing practices translates well to building your speech framework and AIDL-based interfaces. I hold an MSc in Computer Science from Belarusian National Technical University and am fluent in English (C1). I would welcome the opportunity to discuss how my experience can contribute to your team.
