

Dear Hiring Team,

I'm excited to apply for the Senior Android App Engineer (Kotlin) role at Intellias. With 9 years of Android experience, including architecting real-time hardware-to-app communication and Smart Device integrations at Arlo using Kotlin Coroutines and Flow, I bring hands-on experience close to the embedded, integration-heavy work this role involves. I've also built Clean Architecture systems from scratch at Halyk Bank, led a team of 5, and driven TDD practices to near-100% code coverage on business-critical features. Beyond hands-on development, I've conducted 50+ technical interviews and mentored junior/mid-level developers at Vention, and spoken on Android architecture at community events — experience directly relevant to the technical mentorship aspect of this position. I'd welcome the chance to bring this combination of integration engineering, testable code practices, and mentoring to your automotive R&D team.

Best regards,

Maksim Sukhotski
