

Dear RevenueCat Hiring Team,

I'm excited to apply for the Senior Android SDK Engineer role. With 9 years of Android experience, including architecting real-time hardware-to-app communication and Smart Device/BLE integrations at Arlo, I'm used to building the kind of low-level, reliability-critical code that a widely-adopted SDK demands. I bring deep expertise in Kotlin, Coroutines, Flow, and Jetpack Compose, along with a strong TDD discipline (MockK, Espresso) that helped me achieve near-100% coverage on critical features at Arlo and 100% coverage during a large-scale Kotlin migration at Turkcell. I've also architected systems from scratch, led engineering teams, and mentored developers through the Belarus Kotlin User Group and 50+ technical interviews at Vention — experience I'd bring to onboarding and code review in a fully-remote culture. I'd welcome the opportunity to bring this mix of hands-on Android/Kotlin depth and architectural ownership to a product used by 32,000+ apps.

Best regards,

Maksim Sukhotski
