

Dear Hiring Team at Sii Polska,

I'm writing to apply for the Android Developer (Kotlin Multiplatform) position. With 9 years of Android engineering experience, I have architected Clean Architecture systems from scratch, including a real-time trading application for Halyk Bank, a banking client, where I led a team of 5 and built modular, testable systems from the ground up. My background is strong in the exact areas this role emphasizes: MVVM/MVI, Coroutines and Kotlin Flow for asynchronous and real-time data handling (demonstrated at Arlo with hardware-to-app communication), and rigorous TDD practices using MockK and Espresso, reaching near-100% code coverage on critical features. I've also driven Jetpack Compose migrations at scale, accelerating development speed by 80% at Slice, and have experience mentoring engineers and leading technical interviews. I'd welcome the opportunity to bring this combination of architectural depth and hands-on delivery to your banking mobile application.

Best regards,

Maksim Sukhotski
