

Dear Hiring Team,

I'm writing to apply for the Senior Android Developer (Kotlin) position on your logistics project. With 9 years of Android experience, I've architected Clean Architecture solutions from scratch, most notably leading the redesign of a real-time trading application at Halyk Bank while managing a team of 5 and cutting delivery bottlenecks by 90% through custom CI/CD workflows. I bring deep, hands-on expertise in Kotlin, Coroutines, and Jetpack Compose, alongside a strong commitment to TDD, having achieved near-100% code coverage on critical features at Arlo. I also have direct experience mentoring and evaluating engineers, having conducted 50+ technical interviews at Vention and mentored developers through the Belarus Kotlin User Group. I'd welcome the opportunity to bring this combination of architectural rigor, testing discipline, and mentorship to your team. Thank you for considering my application.

Best regards,

Maksim Sukhotski
