

Dear Ruby Labs Hiring Team,

I'm excited to apply for the Senior Android Engineer role. With 9 years of Android experience, including building high-traffic B2C applications at Zalando and Slice, I bring hands-on expertise in Kotlin, Coroutines, Flow, and Jetpack Compose, having driven an 80% development speed increase at Slice by migrating legacy views to Compose and a modular component design. At Arlo, I architected real-time hardware-to-app communication and achieved ~100% test coverage on critical features using TDD with MockK and Espresso, reflecting the rigor I bring to performance, scalability, and code quality. At Halyk Bank, I architected a Clean Architecture solution from scratch and led a team of 5, cutting delivery bottlenecks by 90% through custom CI/CD workflows. I'm comfortable owning development processes end-to-end, from code reviews to CI/CD pipelines, and thrive in cross-functional, fast-moving teams. I'd welcome the opportunity to bring this experience to Ruby Labs' mobile app.

Best regards,

Maksim Sukhotski
