

Dear Hiring Team,

I'm writing to apply for the Android Developer (Kotlin Multiplatform) role supporting your banking platform project. Over 9 years as an Android engineer, I've architected a scalable Clean Architecture system from scratch for a real-time trading application at Halyk Bank, leading a team of 5 and building CI/CD workflows that cut delivery bottlenecks by 90%. My work at Arlo and Zalando has centered on Coroutines and Flow for asynchronous, real-time app-to-hardware and reactive UI features, and I've driven Jetpack Compose migrations that accelerated development speed by 80% at Slice. I've also led 50+ technical interviews and mentored developers, and I hold 100% TDD coverage discipline across multiple roles, including migrating half of Turkcell's Java codebase to Kotlin. I'd welcome the chance to bring this architecture, testing, and mentoring background to your banking mobile platform team.

Best regards,

Maksim Sukhotski
