

Dear Hiring Team,

I'm writing to apply for the Android Developer position at your financial-sector client via Astek Polska. With 9 years of Android engineering experience, I've built my career around Clean Architecture and SOLID principles, having architected a modular Clean Architecture system from scratch for a real-time trading application at Halyk Bank while leading a team of five. I bring hands-on experience with asynchronous programming using Coroutines and Kotlin Flow, including managing real-time hardware-to-app communication and Smart Device integrations at Arlo. My background also includes MVI-based presentation layers as part of my core architectural toolkit, alongside a strong TDD discipline (achieving ~100% code coverage on critical features). I'd welcome the opportunity to bring this architecture-first, quality-driven approach to your client's Android platform.

Best regards,

Maksim Sukhotski
