

Dear Hiring Team,

I'm writing to apply for the Android Engineer role at emagine Polska. With 9 years of Android development experience, I've built my career around Clean Architecture, SOLID principles, and MVI/MVVM presentation patterns, using Kotlin Coroutines and Flow for asynchronous work — the same architectural foundations this role is built on. At Halyk Bank, I architected a modular Clean Architecture from scratch for a real-time trading application and led a team of 5, an experience directly relevant to working in a banking domain. My background also includes deep TDD practice (MockK, Espresso) and driving CI/CD workflows to improve delivery speed and quality. I'd welcome the opportunity to bring this architecture-first, test-driven approach to your team.

Best regards,

Maksim Sukhotski
