

Dear Hiring Team,

I'm excited to apply for the Senior Android Developer role at Awareson. With 9 years of experience building high-scale B2C applications, I've spent my career architecting and refactoring Android codebases using Clean Architecture, MVVM, and SOLID principles — most recently at Zalando, Slice, and Arlo, where I worked on features used by millions of users. At Halyk Bank I architected a modular Clean Architecture from scratch for a real-time trading application and led a team of 5, while at Turkcell I migrated 50% of a legacy Java codebase to Kotlin with full TDD coverage. I bring strong CI/CD and release-process experience, having built custom pipelines that cut delivery bottlenecks by 90% and improved deployment speed by 25%. I'd welcome the opportunity to bring this architectural and engineering-standards focus to your mobile platform as it scales across European markets.

Best regards,

Maksim Sukhotski
