

Dear Allegro Hiring Team,

I'm writing to apply for the Senior Mobile Software Engineer (Android) role on Allegro Pay. I bring 9 years of native Android development experience, including building high-traffic B2C features with Kotlin, Jetpack Compose, and Coroutines/Flow at companies like Zalando and Slice. At Halyk Bank, I architected a Clean Architecture solution from scratch for a real-time trading application and led a team of 5 while cutting delivery bottlenecks by 90% through custom CI/CD workflows. At Arlo, I achieved close to 100% test coverage on critical features using TDD with MockK and Espresso, reflecting the emphasis this role places on code quality and testing. I've also mentored junior developers and conducted 50+ technical interviews as a Technical Lead at Vention, which aligns well with the mentorship expectations of this position. I'd welcome the opportunity to bring this combination of architecture, testing rigor, and team leadership to the Allegro Pay Android team.

Best regards,

Maksim Sukhotski
