

Dear Ruby Labs Hiring Team,

I'm writing to apply for the Lead Android Engineer role, bringing 9 years of Android experience across high-scale B2C products and a consistent record of technical leadership. At Halyk Bank I architected a modular Clean Architecture from scratch for a real-time trading application and led a team of 5, cutting delivery bottlenecks by 90% through custom CI/CD workflows. At Slice, I drove complex B2C UI/UX work that lifted purchase conversion to 50% and accelerated development speed by 80% via a Jetpack Compose migration and modular component design. Beyond individual teams, I've conducted 50+ Android technical interviews at Vention and mentored developers through the Belarus Kotlin User Group, reflecting the mentorship and hiring involvement this role calls for. My background in Kotlin, Coroutines/Flow, TDD, and quality-gate/CI ownership (at Arlo and Halyk Bank) aligns closely with the architectural and engineering-standards ownership Ruby Labs is looking for. I'd welcome the opportunity to bring this combination of hands-on depth and team leadership to your Android platform.
