

Dear Ruby Labs Hiring Team,

I'm writing to apply for the Lead Android Engineer position. Over 9 years of Android development, I've architected systems from scratch, including a modular Clean Architecture built for a real-time trading application at Halyk Bank while leading a team of 5. At Slice, I led delivery of complex B2C UI/UX features and drove an 80% development speed improvement by migrating legacy views to Jetpack Compose, and at Arlo I architected real-time hardware-to-app communication while achieving ~100% test coverage on critical features. Beyond hands-on architecture, I've conducted 50+ Android technical interviews as a Technical Lead at Vention and mentored developers through the Belarus Kotlin User Group. I'd welcome the opportunity to bring this combination of architectural ownership and team leadership to Ruby Labs' Android platform.

Best regards,

Maksim Sukhotski
