

Dear Hiring Team,

I'm writing to apply for the Senior Android Developer role. With 9 years of Android experience across Zalando, Slice, Arlo, Halyk Bank, and Turkcell, I've built high-scale B2C applications using Kotlin, Clean Architecture, MVVM, and SOLID principles, and have led CI/CD pipeline design and code review culture in distributed agile teams. At Halyk Bank I architected a modular Clean Architecture system from scratch and cut delivery bottlenecks by 90% through custom CI/CD workflows, and at Slice I improved purchase conversion by 50% through UI/UX refinements. I'm comfortable working both independently and cross-functionally with product, design, and backend teams, and I bring a strong TDD discipline (MockK, Espresso) along with experience mentoring engineers and running technical interviews. I'd welcome the opportunity to bring this architecture and delivery experience to your team.

Best regards,

Maksim Sukhotski
