

Dear Hiring Team,

I'm writing to apply for the Senior Mobile Ad Monetization Engineer role at Optiveum. With 9 years of Android experience, I've spent a significant part of my career on performance-critical, SDK-heavy work: at Arlo, I architected real-time hardware-to-app communication and managed third-party integrations using Coroutines and Flow, while driving code coverage to ~100% with rigorous TDD practices to keep crashes and regressions out of production. Across Zalando, Slice, and Halyk Bank, I've repeatedly built and scaled Clean Architecture systems from scratch, optimized multithreaded, high-traffic B2C features, and improved delivery speed and stability in distributed teams. I'm comfortable owning infrastructure end-to-end, from memory and lifecycle optimization to CI/CD and quality tooling, which maps directly to the ownership this role calls for. I'd welcome the chance to bring that same rigor to your ad mediation and monetization infrastructure. Thank you for your consideration.

Best regards,

Maksim Sukhotski
